Wilderness Emergency Medical Technician (WEMT) Course

40-Hour Course

Who is ASHI

The American Safety and Health Institute (ASHI) is a not-for-profit association of professional safety and health educators providing nationally recognized training programs through more than 4,000 approved Training Centers across the United States and in several foreign countries. ASHI collaborates with a wide variety of other organizations to produce public safety & health products, materials and services that meet or exceed the needs of the membership.

ASHI Mission Statement

To continually improve safety and health education by promoting high standards for members, principals of sound research for curriculum development and the professional development of safety and health instructors worldwide.

What is Wilderness Medicine

Wilderness Emergency Care (WEC) is a program that trains and certifies people to cope with wilderness hazards and emergencies. While the focus of ASHI training is on wilderness situations, the skills that ASHI teaches can be used in

urban emergencies as well. In fact, you can think of urban emergency training as a special case of wilderness training, for situations where you have more resources, and professional help is usually no more than ten minutes away. But if a major disaster disrupts urban services and cuts you off from urban resources, then for the purpose of emergency care you are in a wilderness situation.

ASHI's WEC courses should therefore appeal not only to those who do wilderness activities, but also to those who want to prepare for disasters and to anyone who wants more thorough intensive training than most urban oriented courses can offer. In WEC programs, individuals are trained to think – use their brains as well as their hands. Individuals are also trained to improvise with whatever they have or can find at the scene.

Wilderness Emergency Medical Technician (WEMT) Course

This course is meant for students who are already certified as an EMT, Paramedic or National Ski Patrol Outdoor Emergency Care (OEC) Technician and need to add wilderness skills and knowledge to be
